There are many programs available to use to protect our computers . It must be a profitable field to have so many players wanting your business. Kaspersky One is a protection service that sets itself apart from all the others. One way it is different is that it is sold in combinations to protect multiple computers. There are three versions: three computers, five computers and ten computers. For those of us who have more than one computer, this is a boon, being able to acquire one protection package that can be installed in several computers.

A second way it is different is that not just computers can be protected, but also certain smart phones and tablets. Blackberry, Symbian, Android and Windows Mobile phones are currently supported A third way it is different is that not only the Windows computer platforms are supported, but Macs are also. What's included? A lot!

- Anti-virus – for mail, file and web
- Firewall – two way
- Anti-phishing
- Anti-spam
- Anti-banner
- Pro-active defense
- Application control
- Mobile security
- Tablet security
- Password manager
- and more

This is a good program for protecting all your computers at a single price, whether you have three, five or ten computers. There is a 30-day free trial available.
